For those who do not want to add “Items” or “Tags” to images, Lightroom 5 makes it much easier to quickly sort or search your images. It’s now possible to view tagged images and the ones with items while you’re sorting through a set of all images, or by Rating, Recent changes, etc. Frames and lenses are like having a map of the location where you will be shooting. It shows your camera settings and tweaks for the photos you take. If you have never used them, it’s a tool to discover a new world. For those who have used it before, it’s a valuable tool to help edit photos more easily. One of the biggest changes in Version 5 is the ability to customize the way these are represented, and organize them even further. In my case, I turn on *Lock to Black and White Mode* just to get the photos looking right. Other than that, I’m using the default, Auto correction lighten setting. The options that are available are sufficient for my needs. I’ve been using the PSD forever, and while it’s not great, for some simple reasons. Most tools are still split between the two horizontal panels, above and below the workspace area, and as such you can only see half the image at any one time. Editing tools are often at the far right, so you can quickly get to them even when you are editing in another tool. Web design can be challenging if you forget to take yourself seriously, causing you to miss out on success.

It's now easier than ever for you to deploy your design work directly to the web. Working with design elements that scale across a wide range of screen sizes and resolutions remains our most significant challenge. Specifically, the work of our creative customers takes them into the realm of photorealistic image editing. In this high-resolution image editing environment we've been tasked, along with our engineering peers, to deliver scores of feature enhancements that accelerate color-correcting and image-enhancing tasks. This challenge has driven the evolution of our Image Processing Layers. By harnessing the power of GPU-accelerated processing, we've unlocked new opportunities to perform such tasks as applying one Lasso selection through a series of different, defined selections. Adobe algorithms now create a non-destructive smart adjustment layer based on one or more manually-selected layers. And, this flexibility is further enhanced through a new mode on the Lasso tool that lets you define a region in any color space. This approach allows us to better understand artistic intent. We developed several features, like Content-Aware Fill, which work in concert to lift out unwanted regions of the image. These enhancements to Lasso selection, color-correction, and key painting tools are sure to empower more creative professionals throughout the world.
