ispring suite is the most complete toolkit, if your business is one that can benefit from using online courses. you can use it to create your own courses, or you can just use it to use in-house courses, or you can create in-house courses, plus use them online. we have to admit that the program is a bit expensive, but in the end it also saves you a lot of time and effort. and to save you even more time, theres a free trial version available. to sum up: if you have a business that wants to improve its online courses, ispring suite is the best tool for the job. i have tested its capabilities with a full course in english, and i can honestly say that it is easy to use. the authoring toolkit itself is designed for windows. ispring suite 9 is not macos compatible, so it can only be integrated with windows-based microsoft powerpoint (there are, however, 32 and 64-bit versions). nevertheless, mac users dont have to give up; they can use ispring via bootcamp, so theres no problem. in fact, ispring can also be easily used (and surprisingly quickly) in parallels desktop. the only problem here is the quality of camera video recording, but even a screencast video can be easily recorded using a virtual machine. the editing process is also faster, since microsoft has optimized the latest version of powerpointapart from the gobs of toolbars and clumsy open / save windows, the ms office suite is not that bad!and the ispring suite modules also work well, even when dealing with multiple objects. there are, of course, some gaps; for example, the quizzes and interactions could be more customizable. 5ec8ef588b
