For the best layout and typographic control, there is nothing better than Adobe Illustrator. But, if you really only need simple Photoshop editing, then you might want to get Photoshop Sketch on the iPad. Lightroom does have some MS-specific shortcomings. For example, in order to move or organize bookmarks, we need to use the right side of the navigation pane. Change the position of the navigation bar back and forth, and try to move bookmark and you'll see what I mean. It would be a lot more convenient if we could just use the bottom left side like we can with the bulk of the navigation bar. Similarly, the new selection options require us to press Ctrl/Cmd+R on Windows and Shift+Option+R on macOS to enter the Region Selection mode. Lightroom for Windows and Lightroom for Mac have an almost identical selection process, but Microsoft's requirement was implemented in a way so that we invariably end up using the Shift key. Finally, adjusting the perspective in Lightroom doesn't seem to have any sort of effect on the way it handles panoramas. Perspective can be manually adjusted, but it is focused solely on the height of the panorama. The width always remains the same. Choose a different height for your panorama and you'll find your rectangular image warps simply because the panos aren't proportionally scaled. First, the Basic Panel. It gives you tools for tweaking your images. So far, there isn't anything we haven't seen before. And that's really the good thing about them: we don't have to make our own tools. The panel has three tools that accept similar parameters: Unsharp Mask, Refine Edge, and Refine Contrast. Each tool has a different way of achieving the same results of sharpening up images, and the way Adobe does it is more or less self-explanatory. In fact, this knob is very well labeled and enables you to quickly make adjusting your images as easy as possible.
