The 20.1 update to Adobe Photoshop is chock-full of slick new features, additions, and fixes. And lots of bug fixes. The new Touch Tool pallet, which is located on the right side of the screen, sits on top of the whole image and makes brushing and masking things easy and intuitive to use. Move your finger around the screen, and the Touch Tool pallet will move along with you. Tap and drag to you like making a brush, use the middle mouse button to copy a brush to the right side, and then tap on the brush options bar to switch out brush tools, gradient tools, and so on. Being able to make brushes stand out is a step in the right direction, and something that has long been requested by many creative professionals. A new zoom tool enables you to zoom in and out easily and accurately. Press (Ctrl+scroll) to zoom to 400% and complete control the zoom, and press (Ctrl+scroll) to zoom to 200% and maintain control. You can also drag the screen to zoom, just like with the Touch Tool pallet; if you have a mouse, go with that. **The new Contrast & Curves tool is great for adjusting contrast and tonal adjustments.** You can apply a Curves adjustment to your image like a film filter and try it out to see what you think. If you like the look, click Apply. You can also now **share Dropbox accounts** and use the **Upload to Dropbox tool | Edit image with Dropbox account**. Then simply drag the image to your Dropbox folder to send it to your account to share on the Web. When you receive it, download the JPEG or PNG image and you're all set to proceed. You can also share images with a third-party application like Adobe Spark.

When it comes to editing PSD documents, Photoshop has tools for both experienced and inexperienced designers. If you have ever used Excel for excel spreadsheets, you already know how to manipulate a PSD file that will allow you to easily create HTML templates to keep your whole content up to date. Then there is the shared PSD format. This permits you to use multiple designers to edit the same document in real time. It's like having a mentor editing your PSD. The phrase "Photoshop is a like a Swiss army knife for photographers" is very apt. The things Photoshop can do are almost endless. And because it works on many different platforms, you can use Photoshop in your work no matter what computer platform you are working on. You can add any of these tools to your HTML markup and you can even use the features of Photoshop on the web. All you need to set up is a shortcut to the Photoshop file that contains all of your content. Let's start by looking at the basics of how to use Photoshop tools on the web. Many of us navigate the internet thanks to a web browser. We are more familiar with the mounds of content on the web and the way we navigate that content, with URL links. We can save these links and organize them in our favorite folders. Sometimes if we want to do something bold with the contents of our folder, we link to the folder directly instead of our web browser. That's how we organize and structure content, and most of us do it fairly well. But what happens when we want to make a really impressive website, but we don't have access to any of the software we need to get that job done? What can we do if we don't have Photoshop?

Adobe once touted Photoshop as a lifeline to the future of the digital photo editing world. The software reshuffled focus in recent years, and it now shares that top billing with Photoshop Discover, which is the company's new creative platform for becoming a publisher of photo content. The most significant feature is the new "Smart Guide" which appears on certain layers or in several presentation windows when you create a new document. You can activate the guide with a single click or through keyboard shortcuts. The Smart Guide displays a repeated cursor which moves in relation to the image or other objects, providing a convenient way to center or snap to particular points in the image. Aside from the new Smart Guide, you'll find new and improved features in the toolbox, like the Panorama Enhance feature (Input > Lens Correction > Panorama Enhance). This feature simplifies the process of aligning a panorama camera view and helps create better images If you had frequently found yourself in need of saving changes after working on an image, then you may have been frustrated. You can now easily save the work using Photoshop Save For Web as a streamlined workflow. You can now create a publishable web design in a single step instead of making a separate.PSD file and uploading it to web builder services. Once the design is completed, simply publish the design to the web through any of the tools

But for a long time now, Adobe has held back on regular updating the Elements version of the software. That was starting to change this year when Adobe planned major updates to both Elements and Photoshop. So far, those upgrades have been rolled out in beta versions. But this version of the product launches the changes. These Elements products are intended to help you organize, edit, and share images for a variety of purposes. The main Elements product is a powerful image-editing application that works with or without a constant connection to the Internet. You can work with it without traditional printing tech, such as a local print shop or scanner. Photoshop tools can be applied to your Elements work with Adobe Bridge, a powerful hybrid image manager and photo browser.

This applies to simple edits, like cropping, as well as complex changes, such as colour corrections or adjustments for exposure, brightness, contrast and white balance. The workflow is simple, too. Select the business card graphics, and Photoshop Elements automatically removes, updates, or even adds new ones. Check out the new Smarter Image Recognition workflow in Adobe Photoshop Elements – select the file, then navigate to Filters > File > Smarter Image Recognition.
