demonstrating what those new 3ds max tools can do, sanjay kumar, head of the content creation team at virtual reality applications has created a 3d environment in vr using only textures and geometry imported directly into vr. a representative shot from his demo is below, where 3d studio max and v-ray software packages from aurora innovations were used to create a room for vive users to experience in vr. the new 3ds max to vr workflow, we are announcing today are aimed at design visualization specialists working to produce high-end, photoreal experiences. with the new 3ds max to vr workflow, were shoring-up data drudgery with capabilities like support for translating materials from the popular v-ray renderer in 3ds max to vr freeing visualization artists to focus on the part they care most about: creating stunning imagery. we're also adding a set of new, industry-standard vr tools to 3ds max 2018.1, to give artists and developers the tools they need to create content for the rapidly growing vr market. as a result, 3ds max will now include native support for rendering 3d scenes in virtual reality. to enable this, we're introducing a new vr renderer that works with existing environments. the renderer is available in both commercial and free versions, and is free for all users. some areas of 3ds max, such as uv editing, have been re-engineered to take advantage of the power of vr. instead of viewing a 3d scene in 3ds max and tweaking uvs on a desktop screen, you can now interact with a 3d scene in vr with a modified "probe" tool that simply allows you to look at the uvs using a widescreen tv. 5ec8ef588b
