Everything in a small fully customizable minimalistic package. The Widget uses the font 04b03, which is included. This Widget is cross-platform. Requires Yahoo Widget Engine. If it doesn't work with your Yahoo Widget Engine you can also get Minisys here on Google PlayStore. Download link: Please give credit to Sherwood Minisys when you use this! Scroll down and find the update at the end of this post that I found and it will tell you where to get the widget and how to add it to your YAHOO Widget Engine. Enjoy! ***** Start the widget ***** I don't know if it can be done but I want the widget to start when you click on the home button of your phone or web browser. By default it needs to be to the right of the home button. There are multiple methods to do this. One I did is to modify the widget with Notepad and change the "disabled" code to this "show" code. ----- minisys widget in action ----- I like it. It's very small and like to have it on my dashboard. FTP Server FTP Server An FTP server allows one to create a public or private file transfer protocol (FTP) site. An FTP server accepts FTP connections and transfers data between a local system and a remote host. The implementation of an FTP server can range from very simple to very complex, depending on the technologies used. A simple FTP server in C, for example, might rely on I/O routines to transfer files between the server and the client. On the other hand, a server written using a more advanced design for network applications might use network protocols for transferring files. Depending on the level of customization the FTP server needs, and on the availability of well-designed tools or interfaces for configuring the server, it is entirely possible to write a server in just a few hours, or even overnight. An FTP server provides three main functions: A means to make directories and retrieve files over the network A means to store information on the server A means to retrieve, manipulate, and store information from a remote client In this article, we'll explain how to install an FTP server. We'll be using the Apache Web server because it's the most popular and offers the most support. If you want to use a different server, then use the one that's appropriate for your purposes. Requirements The following materials are required to install an FTP server: An operating
